Summary

Laravel Backend Engineer with expertise in building scalable systems using modular architecture and layered patterns. Skilled in PHP 8+, SOLID principles, TDD, DDD, and design patterns for clean, testable code. Experienced in organizing projects to enhance reusability and team productivity. Blending creativity and precision to craft secure, effective solutions.

Work Experience

Freelance Backend Developer

Backend Developer skilled in Laravel with strong knowledge of Object-Oriented Programming (OOP) principles. I develop efficient, scalable, and maintainable software tailored to diverse needs, with experience working directly with clients to deliver high-quality and sustainable solutions.

Education

- BSc in Information Technology Engineering
Damascus University, 2021 – Present
Currently in 5th year – Expected to graduate in 2026
- Specialization: Software Engineering.

Languages

- Arabic (Native)
- English (Fluent)

Technical Skills

- Programming Languages: PHP, Java, OOP, C#, C++
- Web Development: RESTful API
- Frameworks & Tools: Laravel, Firebase, Pusher
- Databases: MySQL
- Version Control & Deployment: Git, Composer
- Testing & Automation: Postman
- Project Management: Agile, Scrum, Jira
- Other Competencies: Clean Code, Clean Architecture

Soft Skills

- Effective Communication
- Flexibility
- Problem-Solving
- Analytical Thinking
- Time & Priority Management
- Team Collaboration

Projects

Advanced Banking System with Design Patterns| Dec 2025

Damascus University - Faculty of Information Technology Engineering

- Designed modular banking system applying behavioral & structural design patterns (Composite, Observer, Strategy, etc.)
- Implemented scalable architecture supporting concurrent transactions with comprehensive audit logging
- Ensured high testability and security compliance in financial operations

Digital Government Complaint System| Oct 2025

Damascus University - Faculty of Information Technology Engineering

- Built integrated digital ecosystem: mobile app for citizens + web dashboard for government entities
- Designed complaint submission system with document attachment and real-time status tracking
- Focused on non-functional requirements: performance, usability, transparency, and quality management

Medical Clinic Management System | Sep 2025

- Developed comprehensive clinic management platform with appointment scheduling and unified patient records
- Implemented patient portal for online booking and secure medical history access

Tourism Reservation Management System | Aug 2024

- Engineered integrated tourism platform for hotel/flight bookings and attraction management
- Created dynamic pricing engine and real-time availability tracking system
